

ŞAFT PLATFORM KRIŞİ

SHAF PLATFORM

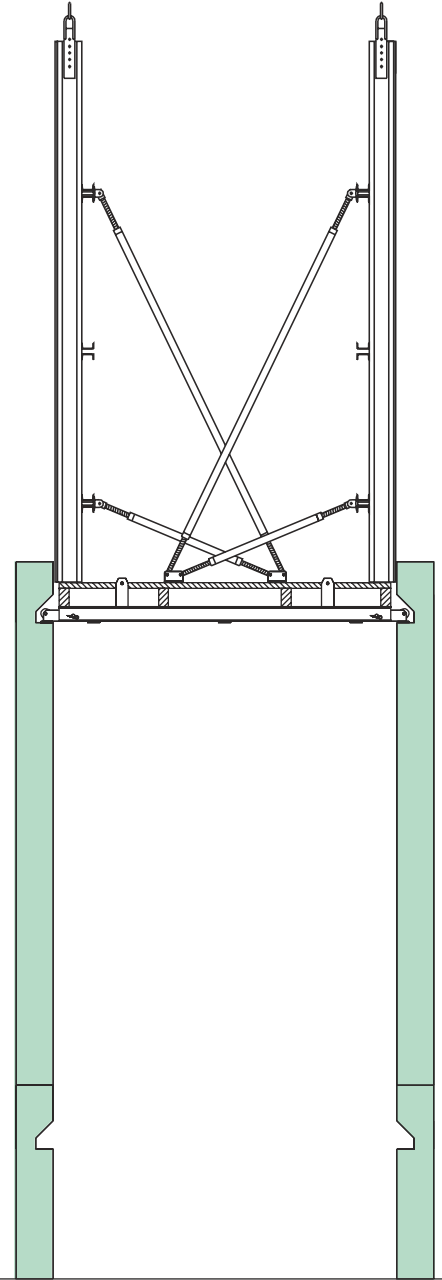

1

Şaft Platformu monte edilir ve şaft platform askıları perde içinde oluşturulan yuvalara takılır. Perde kalıbı platform üzerine yerleştirilir ve beton dökümü yapılır.
The shaft platform is assembled and gravity pawls are inserted in to the holes. The formwork is placed on the platform and concrete is poured.

2

Vinç tek hamlede platformu üst kata çeker. Şaft Platform askıları aşağıya doğru dönerek platformun yukarı hareketine izin verir.
The platform is raised in one single crane-lift to the next stage. As gravity pawls turn downwards, they permit the upward movement of the platform.

3

Şaft platform askıları üst kattaki yuvalara takılarak taşıma işlemi bitirilir. Perde kalıbı platform üzerine alınır.
Gravity pawls drop in to the holes at the next stage, so the shifting prудuce is completed.
